ORDERING SENSORS

Sensors are constructed with various types of protection/mounting hardware, extensions, and wire terminations. The sensor types and their temperature ranges are shown in the table. See “Temperature Limits” for maximum service temperatures applicable to the protection tube, mounting hardware, wire extensions, etc.
This section shows only a limited selection of the available sensors. The sensors are organized by hardware type. Most hardware can house any type thermocouple or RTD. Terminations are usually either lug type or standard plugs, but many other types are available. Various ‘head enclosures’ are also available. Dimensions can be custom designed to meet your specifications.

SERVICE TEMPERATURES	
304/316 SS tubing/protection/mounting hardware	1600°F
Inconel® 600 tubing/protection/mounting hardware	2100°F
Alumina	3400°F
Mullite	2700°F
Fiberglass insulated extension wire	842°F
FEP insulated extension wire	392°F
Junction box (BX) connector	400°F
Plug	400°F

TEMPERATURE LIMITS

Sensor selection depends on two separate temperatures: process temperature and connector temperature. Make sure the local temperature at each component does not exceed the maximum rated service temperature for that component. Note that extension wire must withstand the process temperature.

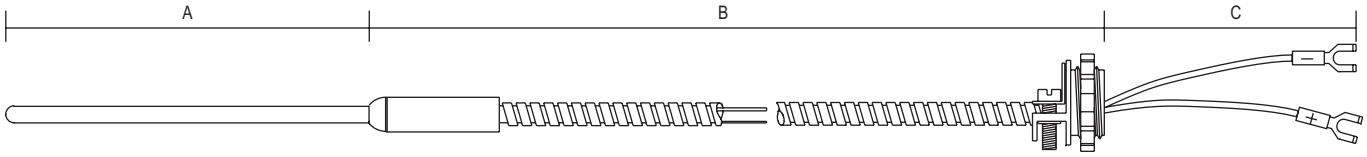
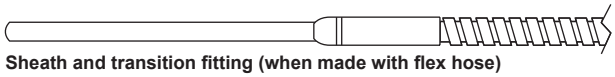
MINERAL INSULATED THERMOCOUPLES AND RTD'S



MINERAL INSULATED TRANSITIONS

Due to the varying size of connection wire and cable, a transition fitting is used between the cold end of the sheath and the connecting wires. This fitting measures 1-1/4″ long by 1/4″ OD for 1/8″ or smaller sheaths, and 1-1/2″ long by 3/8″ OD for 3/16″ and 1/4″ sheaths. Larger sheaths and sheaths terminating in connectors other than wire or cable do not require transition fittings.

Basic sheath configuration



Sheath and transition fitting (when made with flex hose)

Sheath and transition fitting (when made with SS overbraid wire)

Sheath and transition fitting (when made with fiberglass wire)

Series R & 8 Mineral Insulated Thermocouples and RTD's are known for their excellent mechanical durability and resistance to electrical breakdown. Mineral Insulated Thermocouples can be bent to most any angle without special equipment.
