

BETA AIR RELAY

Pressure & Temperature Switches

The pressure operated AIR RELAY

Specially designed for:

- Snap acting pneumatic control.
- Control of pneumatic motors / valves.
- Offshore & Onshore.
- Zone 0 applications.

THE REAL SNAP-ACTING AIR RELAY

THE “BETA AIR RELAY”: Your special is our standard!

The “user friendly generation” pressure and temperature switches from BETA can also be supplied with a pneumatic switching element (Air Relay).

This pilot operated snap acting pneumatic switching element has very attractive features, such as:

- Snap acting (no throttling band)
- High accuracy
- Low deadband
- Very low range (45 mbar >)

Typical applications for the Air Relay are:

- Valve control
- Bleed-off-shut-down systems
- Alarm systems
- In hazardous area's; even in zone 0 (no spark)

The user-friendly generation

HOW TO SELECT YOUR BETA AIR RELAY SWITCH

BETA uses a simple and logical model code system for easy, accurate product specification, project coordination, efficient document handling and after sales service.

TO SELECT YOUR SWITCH

Follow section 1 through 5

If required: For “Optional” and “Special” accessories
Follow section 6 or 7 .

Ambient temperature:

Standard: -30 to +80°C

Repeatability:

± 0.5% of Full Range* (measured at 20°C ambient
temperature acc. to ANSI/I.S.A.-S51.1-1979).

Tagging/ setting:

BETA will add your tag no. on the nameplate and set the
pressure switches at desired setpoint if this is clearly indicated.
on your order.

Temperature switches can also be set at an additional charge.

Warranty:

36 months from EX-Works date of manufacture excl. “wetted parts”
and use of clean, dry air or inert gas as pilot/ supply only!

Note:

Wetted parts are not guaranteed against corrosion or permeation since processes vary from plant and concentration of harmful
fluids, gasses or solids vary from time to time in a given process.
Empirical experience by users should be the final guide and alternate materials based on this are generally available.

Ranges given here are valid for setpoints at increasing pressure in (m)bar and at 2 bar Pilot supply pressure.

Deadband values are the max. possible values for the pressure switch with Air Relay switching element and elastomer diaphragm/O-ring combination and varies nearly linear with set point between limits of range.

Ranges and deadband values may vary at higher Pilot pressures (up to max. 7 bar) and/ or in case of metal diaphragm. Consult your BETA switch Representative.

RANGES for AIR RELAY Vacuum Switches

D 359 H	[150 - 3450]	[mbar]	[75]	[mbar]						

IN THE FOLLOWING TABLE THE ESTIMATED INFLUENCE FOR INCREASING STATIC PRESSURE IS GIVEN.
 (Provided pilot / supply pressure is the same.)

SENSOR	SETPOINT	DEADBAND
D...L	1 mbar/bar	= -10 mbar/bar
D...H	-2 mbar/bar	= -5 mbar/bar

Example: D...H-type Diff. setpoint: 1 bar (1000 mbar).

If static pressure increases 10 bar Diff.setpoint will be $(10 \times -2 \text{ mbar}) = -20 \text{ mbar}$ less = 980 mbar.

NOTE: For differential application outside above ranges consult your BETA Switch Representative.

Differential Pressure Switches can use the same Diaphragm/O-ring combinations as Pressure Switches but we have to consider following:

TYPE	STANDARD	FOLLOWING COMBINATIONS ARE POSSIBLE
D...H	P1	Metal + TCP

Note: Pilot pressure > 2 bar will influence deadband also the same as for pressure switch.
 Consult your Beta representative.

¹⁾ Wetted parts are suggested for use on the service indicated. However they do not constitute a guarantee against corrosive or permeation since processes vary from plant to plant.
 Empirical experience by users should be the final guide. The diaphragm / O-Ring combinations are for process temperatures of -30°C to +80°C, unless otherwise indicated.
 For process temperatures beyond these limits please contact your BETA Switch Representative.

²⁾ Only for 1/4" & 1/2" process connections. Not available on vacuum switches. For other sizes and materials, consult your BETA Switch Representative.

³⁾ PTFE O-Ring not suitable for vacuum switches or vacuum conditions.
 (Wetted internal spring of Co-Cr-Ni alloy, comparable with Elgiloy).

⁴⁾ For process temperature > 100 °C, consult your BETA Switch Representative.

⁵⁾ Other diaphragm materials like Hastelloy available, consult your BETA Switch Representative.

⁶⁾ High temperature refers to max. 140 °C at process connection.

Note:

Wetted parts are not guaranteed against corrosion or permeation since processes vary from plant and concentration of harmful fluids, gasses or solids vary from time to time in a given process.
 Empirical experience by users should be the final guide and alternate materials based on this are generally available.

5 SWITCHING ELEMENTS

C1 - P504H - S1N - V2 - **SA** - B - X1

For the BETA Pressure (Vacuum or Temperature) switches the Air Relay is available in two configurations:

Type “SA” for Normally Closed (N.C.) operations

This Air Relay opens a pneumatic circuit when the process pressure (or temperature) exceeds the set point (Actuated). It shuts-off the pneumatic circuit at decreasing pressure (or temperature). (De-actuated)

(Fig. 1)

Fig. 1: Air Relay SA, Schematic N.C.

Type “SB” for Normally Open (N.O.) operations

This Air Relay shuts-off a pneumatic circuit when the process pressure (or temperature) exceeds the set point. It opens the pneumatic circuit at decreasing pressure (or temperature).

(Fig. 2)

Fig. 2: Air Relay SB, Schematic N.O.

GENERAL SPECIFICATIONS: AIR RELAY / SA / SB

- Pilot supply pressure : 2 to 7.0 bar
- Pilot air consumption : less then 1 l/ min. at 2 bar supply
- Signal in pressure : up to 7.0 bar **maximum**.
- Media for Pilot supply and Signal in supply : clean, dry air or inert gas
- Signal flow capacity : max. 20 l/min. at 2 bar

IMPORTANT:

The signal pressure should NOT be lower then the pilot supply pressure.

Changing the signal or pilot pressure will result in a change in the adjustable range and the dead band.

Consult your BETA Representative.

AIR RELAY CONNECTION (Fig. 3)

The Air Relay connections are situated and clearly marked at one side of the switch enclosure.

Standard connections include 1/4" NPTF threaded brass (standard **C1** Enclosure) or 316 SS connections.

(standard **C8** Enclosure, option for C1 Enclosure.)

The external connections are connected to the Air Relay through plastic tubes.

The switch has been provided with a venting port to avoid overpressure in the enclosure.

The "Signal In" pressure connection and the "Pilot Supply" connection may be connected to each other inside the switch enclosure as an option

(provided that "Signal In" pressure is > 2 bar).
